

Business Requirement Document

Business Requirements

- The system should support customer registration.
- The system should manage products and categories.
- The system should track inventory quantity.
- The system should process customer orders.
- The system should support payment management.
- The system should track shipment status.
- The system should allow customer reviews.
- The system should generate reports.

Functional Requirements

- Customers can register and update profiles.
- Admin can add, update, and delete products.
- Customers can place orders.
- The system calculates total order amount.
- The system stores payment details.
- The system updates shipment status.

Non-Functional Requirements

- The system should be secure.
- The system should provide fast response time.
- The system should ensure data accuracy.
- The system should support backup and recovery.
- The system should be scalable.

Project Scope

- Customer Management
- Product Management

- Order Processing
- Payment Management
- Shipment Tracking
- Review Management
- Report Generation

Assumptions and Constraints

- Users have internet access.
- Only given entities are used in the project.
- Valid data should be entered by users.
- Database should reduce redundancy.
